## Example 1 Increasing rate preference shares

## Reference: SB-FRS 33, paragraphs 12 and 15

Entity D issued non-convertible, non-redeemable class A cumulative preference shares of CU100 par value on 1 January 20X1. The class A preference shares are entitled to a cumulative annual dividend of CU7 per share starting in 20X4.

At the time of issue, the market rate dividend yield on the class A preference shares was 7 per cent a year. Thus, Entity D could have expected to receive proceeds of approximately CU100 per class A preference share if the dividend rate of CU7 per share had been in effect at the date of issue.

In consideration of the dividend payment terms, however, the class A preference shares were issued at CU81.63 per share, ie at a discount of CU18.37 per share. The issue price can be calculated by taking the present value of CU100, discounted at 7 per cent over a three-year period.

Because the shares are classified as equity, the original issue discount is amortised to retained earnings using the effective interest method and treated as a preference dividend for earnings per share purposes. To calculate basic earnings per share, the following imputed dividend per class A preference share is deducted to determine the profit or loss attributable to ordinary equity holders of the parent entity:
$\left.\begin{array}{lrcrr}\text { Year } & \begin{array}{r}\text { Carrying } \\ \text { amount of } \\ \text { class A }\end{array} & \begin{array}{c}\text { Imputed }^{1} \\ \text { dividend } \\ \text { preference } \\ \text { shares 1 } \\ \text { January }\end{array} & \begin{array}{r}\text { Carrying }^{2} \\ \text { amount of } \\ \text { class A }\end{array} & \begin{array}{r}\text { Dividend } \\ \text { paid }\end{array} \\ \text { preference } \\ \text { shares 31 } \\ \text { December }\end{array}\right]$

$\left(1,700 \times{ }^{12} / 12\right)+\left(800 \times{ }^{7} / 12\right)-\left(250 \times{ }^{1} / 12\right)=2,146$ shares

## Example 8 Convertible bonds settled in shares or cash at the issuer's option

## Reference: SB-FRS 33, paragraphs 31-33, 36, 58 and 59

An entity issues 2,000 convertible bonds at the beginning of Year 1. The bonds have a three-year term, and are issued at par with a face value of CU1,000 per bond, giving total proceeds of CU2,000,000. Interest is payable annually in arrears at a nominal annual interest rate of 6 per cent. Each bond is convertible at any time up to maturity into 250 ordinary shares. The entity has an option to settle the principal amount of the convertible bonds in ordinary shares or in cash.

When the bonds are issued, the prevailing market interest rate for similar debt without a conversion option is 9 per cent. At the issue date, the market price of one ordinary share is CU3. Income tax is ignored.

The liability and equity components would be determined in accordance with SB-FRS 32 Financial Instruments: Presentation. These amounts are recognised as the initial carrying amounts of the liability and equity components. The amount assigned to the issuer conversion option equity element is an addition to equity and is not adjusted.

## Basic earnings per share Year 1:

$\frac{\text { CU1,000,000 }}{1,200,000}=$ CU0.83 per ordinary share

## Diluted earnings per share Year 1:

It is presumed that the issuer will settle the contract by the issue of ordinary shares. The dilutive effect is therefore calculated in accordance with paragraph 59 of the Standard.

$$
\frac{\text { CU1,000,000 }+ \text { CU166,331 }}{1,200,000+500,000^{17}}=\text { CU0.69 per ordinary share }

|  | 19,400,000 | 5,620,000 | 3.45 | tidilutive |

Because diluted earnings per share is increased when taking the convertible preference shares into account (from CU3.23 to CU3.45), the convertible preference shares are antidilutive and are ignored in the calculation of diluted earnings per share. Therefore, diluted earnings per share for profit from continuing operations is CU3.23:

|  | Basic EPS | Diluted EPS |

## Example 12 Calculation and presentation of basic and diluted earnings per share (comprehensive example) ${ }^{37}$

This example illustrates the quarterly and annual calculations of basic and diluted earnings per share in the year 20X1 for Company A, which has a complex capital structure. The control number is profit or loss from continuing operations attributable to the parent entity. Other facts assumed are as follows:

Average market price of ordinary shares: The average market prices of ordinary shares for the calendar year 20X1 were as follows:

| First quarter | CU49 |
| :--- | :--- |
| Second quarter | CU60 |
| Third quarter | CU67 |
| Fourth quarter | CU67 |

The average market price of ordinary shares from 1 July to 1 September 20X1 was CU65.
Ordinary shares: The number of ordinary shares outstanding at the beginning of $20 \times 1$ was 5,000,000. On 1 March 20X1, 200,000 ordinary shares were issued for cash.

Convertible bonds: In the last quarter of 20X0, 5 per cent convertible bonds with a principal amount of CU12,000,000 due in 20 years were sold for cash at CU1,000 (par). Interest is payable twice a year, on 1 November and 1 May. Each CU1,000 bond is convertible into 40 ordinary shares. No bonds were converted in 20X0. The entire issue was converted on 1 April 20X1 because the issue was called by Company A.

Convertible preference shares: In the second quarter of $20 \times 0,800,000$ convertible preference shares were issued for assets in a purchase transaction. The quarterly dividend on each convertible preference share is CU0.05, payable at the end of the quarter for shares outstanding at that date. Each share is convertible into one ordinary share. Holders of 600,000 convertible preference shares converted their preference shares into ordinary shares on 1 June 20X1.

Warrants: Warrants to buy 600,000 ordinary shares at CU55 per share for a period of five years were issued on 1 January 20X1. All outstanding warrants were exercised on 1 September 20X1.

Options: Options to buy 1,500,000 ordinary shares at CU75 per share for a period of 10 years were issued on 1 July 20X1. No options were exercised during 20X1 because the exercise price of the options exceeded the market price of the ordinary shares.

Tax rate: The tax rate was 40 per cent for 20X1.
